
DAVIDSONVILLE DUMPING AREA

AOC-28

Joint Base Andrews/Davidsonville Transmitter Station

February 2013

BACKGROUND

The Davidsonville Dumping Area (AOC-28) is located approximately 2,000 feet east of the western Davidsonville Transmitter Site boundary and is accessible by the public. Several piles of miscellaneous debris (scrap metal, wood, construction debris, and domestic rubbish) were disposed of at the site between 1986 and 1990. No evidence of dumping hazardous household or industrial materials was observed. General removal of the trash and debris was recommended.

A Preliminary Assessment/Site Investigation (PA/SI) was completed in 2005 to determine whether environmental impacts exist at the site. The PA/SI report recommended no further action at AOC-28. Civil Engineering performed a removal of surface debris in July 2005, and a no further action memorandum was issued in August 2005.

RISK DRIVERS

Contaminants: Waste material

Media: None

Exposure Pathways Completed: Source removed

Current Land Use/Surface Cover: Open Space

Reasonably Anticipated Land Use: Open Space

Relative Risk: NR

CHALLENGES

The investigation and cleanup of the site have been completed.

PERFORMANCE-BASED APPROACH

A Triad site investigation was utilized in 2005 to determine the extent of impacts at this site. The investigation concluded that there is no contamination requiring further investigation or a remedial action. However, a removal of the surface debris was performed.

The past schedule for this site was:

Remedial Investigation (RI)	8/2005 (Complete)
Feasibility Study (FS)	8/2005 (Complete)
Proposed Plan (PP)	N/A
Record of Decision (ROD)	N/A
Remedial Design (RD)	N/A
Remedial Action-Construction (RA-C)	N/A
Remedy In Place (RIP)	8/2005 (Complete)
Remedial Action-Operation (RA-O)	N/A
Response Complete (RC)	N/A
Site Closure (SC)	N/A
